

The same link can depend on the encoder

Most encoder-dependent eligible link for each of the twelve fixed paper examples

Cells: repetitions with the target among the 25 nearest papers (0–10); targets listed in the CSV.
256 candidates; endpoints always eligible. Upper/lower six rows: high/low-agreement sources.
† Source/label caveat. ‡ Target abstract is incomplete. See individual case notes.
Each link is selected for maximal model disagreement; this panel does not measure its prevalence.
